Front-End and Mobile Developer

Docker | Knowledge of Back-End Languages | Node.js | Software Engineering Undergraduate | Experience in Front-End Development (React, JavaScript/TypeScript) | Figma | Adobe XD | Automated Testing | Code Versioning with Git | Kanban | Effective Communication | Problem-Solving Skills | Next.js | Tailwind | Java

I'm a 21-year-old Front-End Developer. I completed high school through the Integrated Technical Program at COTEMIG in 2021, where I gained solid knowledge in HTML, CSS, JavaScript, PHP, MySQL, and Networks.

I began my career with a six-month internship at Verticis Webstudio, where I improved my skills in WordPress, PHP, and JavaScript. Later, I worked as a Junior Front-End Developer at Speedio for 1 year and 8 months, working with Vue.js, Node.js, TypeScript, Ruby on Rails, and Cypress. This experience deepened my expertise in responsive web development and TypeScript.

Most recently, I worked for 11 months at Voicer as a Front-End Developer, contributing to the development of new features and leading the migration of the application from React.js to Next.js, enhancing my experience with React, Next.js, PrimeReact, and Tailwind CSS.

I have advanced English skills, certified by the *Cambly Certificate of Accomplishment*. I'm currently seeking new opportunities in Front-End Development with React and React Native, and I'm recognized for my effective communication, responsibility, proactivity, and strong command of TypeScript.

Education

- **Software Engineering | FIAP University | 2023 – Present Days**

I am currently pursuing a comprehensive education in software development, with a focus on languages such as JavaScript — particularly React — and Java, along with data science using R. Throughout my academic journey, I have deepened my understanding of calculus (derivatives and integrals), which has strengthened my logical reasoning for modeling and solving complex problems. I have hands-on experience developing dynamic and responsive interfaces with React, applied in semester-long projects such as *Global Solution*, which involve building real-world solutions for companies. I have also built a solid foundation in computer networks, covering protocols, infrastructure, and security principles. Additionally, I study relational databases with an emphasis on data modeling and SQL queries.

- **High School | COTEMIG | 2020 – 2021**

Developed websites using HTML, CSS, Bootstrap, and JavaScript, with a focus on responsive design and user experience. Worked with React to create dynamic interfaces and interactive components, modernizing and enhancing application interactivity. Additionally, built robust and dynamic systems using PHP, integrated with MySQL and Ajax, delivering efficient and interactive functionality.

Skills

- **Basic Web Development** – HTML, CSS, Bootstrap, JavaScript (ES6), JQuery and WordPress.
- **Frontend Development** – React, Next.js, Styled Components, Stitches, Vue.js, Quasar, Cypress and Firebase.
- **Backend Development** – Java, Spring Boot, ORM, Node.js, PHP7, Python, MySQL, Postgres and MongoDB.

- **Mobile Development** – React Native, React Native Reanimated, Gesture Handler and TypeScript.

Experiences

- **Voicer** (September 2024 – July 2025)
Position: Front-End Developer
Service Provided: For 11 months, I worked as a Front-End Developer at Voicer, contributing to the improvement of the Distribution Center management system. I was responsible for developing new features, fixing bugs, and migrating the application from React.js (Vite) to Next.js, helping modernize the platform and improve its performance. I developed dynamic interfaces using PrimeReact and Tailwind CSS, focusing on reusable and responsive components. Additionally, I had the autonomy to restructure the project, define architectural patterns, and build a backend using Next.js API routes, efficiently integrating it with the frontend.
- **Speed IO** (January 2022 – August 2023)
Position: Front-End Developer
Service Provided: During my 1 year and 8 months tenure as a Full Stack Developer at Speedio, I played a crucial role in the development of new API features, leveraging Node.js and Ruby on Rails to create new routes following the REST standard. I significantly contributed to legacy code fixes, bug resolutions, and the implementation of new features using Vue.js, ensuring quality through Cypress testing.
- **Verticis Webstudio**(June 2021 – December 2021)
Position: Software Development Intern
Service Provided: I commenced my professional journey as a Web Development intern specializing in WordPress at Verticis, a leading digital solutions provider. This pivotal opportunity was secured through strategic networking on LinkedIn while I was pursuing my technical high school education at COTEMIG in 2021. During my tenure, I played a pivotal role in enhancing platform functionality, notably integrating Google Ads to optimize client campaigns. Additionally, I contributed significantly to the maintenance and development of diverse websites, encompassing dynamic elements such as landing pages, e-commerce solutions, and corporate portals. Leveraging my proficiency in WordPress, PHP, and JavaScript, I ensured seamless user experiences and operational continuity for our clients.

Stacks Certificates

- Cambly Certificate of Accomplishment
- React Native and Expo Fundamentals
- React Native Navigation Design
- System & React
- Http And Performance
- React Hooks
- Next.js Fundamentals
- React Fundamentals
- React Complete
- React with TypeScript
- Automated Front End
- CSS Grid Layout
- JavaScript ES6
- WordPress as CMS
- CSS Flexbox
- Web Design

Languages

- English – Upper-Intermediate (C1) | CAMBLY: ENGLISH TUTORS ONLINE | 2022 - 2024
